Industrial 10/100/1000M Ethernet Surge Protector (Passive)

Part Number: SPD-ETH-1

INTRODUCTION

The SPD-ETH-1 is a passive, rugged, industrial-grade, 10/100/1000M Ethernet surge protector that can be used to limit the voltage surges and spikes introduced to the Ethernet data lines. This product features 2-stage surge protection – Gas Discharge Tubes (GDT) and Transient Voltage Suppressors (TVS). The SPD-ETH-1 is designed to connect in series to the input of the protected equipment; when a high-voltage surge is introduced into the input, the GDT conducts electric current after becoming ionized, which in turn discharges the high-voltage surge to the earth ground. The excessive voltage will be further clamped to a safe range that the equipment can accept by the TVS. The unit features passive circuitry designs and thus requires no external power; it supports data rates up to 1000Mbps and can be used for protecting 10/100/1000M Ethernet equipment. This product comes with a dedicated cable lug for solid earth ground connections and can be mounted directly onto a standard 35mm DIN rail, making it an ideal solution for heavy-duty industrial applications.

■ FEATURES

- Rugged industrial grade.
- Protects 10/100/1000M Ethernet data lines.
- 2-stage surge protection.
- RJ45 female sockets for easy connections.
- Dedicated cable lug for solid earth ground connections.
- Passive circuitry, no power is required.
- Supports data rates up to 1000Mbps.
- Direct DIN-Rail mounting.
- Operating temperature: -40°F to 185°F (-40°C to 85°C).
- Surface Mount Technology manufactured to RoHS and ISO-9001 standards.
- Test Standards: IEC61643-21 / EN61643-21.
- 5-year manufacturer's warranty.

■ SPECIFICATIONS

Compatibility:	IEEE 802.3, 802.3u, 802.3ab standards
Protection:	2-stage surge protection (Gas Discharge Tubes and Transient
	Voltage Suppressors)
Power Source:	Passive device, no power required
Clamping Voltage (stage 1):	120 V
Series Resistance (stage 2):	≤0.5 Ohms
Clamping Voltage (stage 3):	58 V
Response Time:	≤1ns
Insertion Loss (100MHz):	≤1dB
Data Rates:	10/100/1000Mbps (auto-switching)
Cable Lug for Earth Ground:	Dedicated cable lug for earth ground connection
	(cable size: up to 12AWG / 3.3mm ²)
Connectors/Sockets:	RJ45 female sockets (protected pins: 1,2; 3,6; 4,5; 7,8)
Dimensions (H \times W \times D):	3.0 x 2.4 x 1.0 in (75 x 62 x 25 mm)
Mounting:	Direct 35mm DIN-rail mounting
Weight:	3.7 oz (106 g)
Operating Temperature:	-40°F to 185°F (-40°C to 85°C)
Operating Humidity:	5~95% RH (no condensation)

Revision: 1.0

■ INSTALLATION NOTES AND TROUBLESHOOTING

Revision: 1.0

- Be sure to connect the input and output wires according to the arrow () signs, the product will not function properly and could be damaged if the input/output direction is reversed.
- The ground wire should be connected to the nearest earth bar or the equipment's metal shell.
- The data and ground wires should be securely fastened for proper protection.
- It is important to note that solely relying on surge protectors could be insufficient or even do more damage than good, as in the cases of improperly installed or poorly selected surge protectors. In many applications, surge protectors are used in conjunction with optical isolators to provide much more effective protection.
- If the system stops working after connecting the surge protector, then the product may be defective. Replace with a new surge protector in such a case.
